Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Biscup (6,245,108) in view of Middleton (6,136,031).

With respect to claim 1, Biscup discloses an apparatus for facilitating fusion of adjacent vertebrae, comprising an implant body (10) dimensioned for positioning within an intervertebral space between upper and lower vertebrae to maintain the vertebrae in desired spaced relation to facilitate fusion thereof, the implant body including lower and upper surfaces (20,30) for engaging the respective lower and upper vertebrae (FIG.5), and first and second side wall portions (60,70) extending between the upper and lower surfaces, the first and second side walls being substantially solid; as best seen in FIG.1.

Although Biscup teaches of openings in the sidewalls, it is noted that Biscup did not teach of narrow longitudinal slits in the sidewalls; as claimed by applicant. However, in a similar art, Middleton evidences the use of narrow longitudinal slits in the sidewalls of an implant body to facilitate the transfer of the force exerted on the implant.

Therefore, given the teaching of Middleton, it would have been obvious to one having ordinary skill in the art at the time the invention was made to replace the

openings of Biscup with the narrow longitudinal slits of Middleton to facilitate the transfer of the force exerted on the implant.

With respect to claims 2-13, it is noted that the above combination of references teaches all the limitations, as set forth in columns 8-9, lines 1-67, and as best seen in FIGS. 1-6. In addition, as to the plurality of the internal bores, it would have been obvious to one having ordinary skill in the art at the time the invention was made to duplicate the bores, since it has been held that mere duplication of the essential working parts of a device involves only routine skill in the art. *St. Regis Paper Co. v. Bemis Co.*, 193 USPQ 8.

With respect to claims 14-17, the method steps, as set forth, would have been obviously carried out in the operation of the device, as set forth above.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
